Project Summary

The summary below provides a quick understanding of our scope of work and general testing procedures. Enclosed in the report is further detail about your building performance including recommendations, asset data, and pictures. Our focus is to work with the trades to remedy any issues or deficiencies during the actual field balancing and not after the balancing has occurred to achieve a positive environment and outcome. The level of success is determined by the availability of the trades, possible parts needed, or time constraints.

Commissioning Activities

Equipment was inspected to ensure that the installation meets Walgreens requirements. Control and equipment setpoints were checked and after balancing was completed performance of each unit was verified. The full list of items that were verified along with any that failed are contained in the checklists in this report.

RTU's (Roof Top Units) w/ Diffusers

Each of the RTU's were measured at their terminal devices or via traverse to establish a total flow for that unit. Each RTU was adjusted to within tolerance per Walgreens standards. Each outlet was then adjusted to within tolerance. Outside air was measured by reading the intake air opening with a velocity grid and multiplying by the free area. The outside air damper was adjusted until the airflow was within the design requirements. Any equipment that fell outside of that tolerance is noted throughout the report.

General Exhaust Fans w/ Grilles

The general exhaust fans were measured by reading each air device with a flow hood. The total airflow for each fan is equivalent to the sum of these readings. Fan speed was then adjusted so that the airflow was within tolerance. Each terminal device was balanced to within tolerance of the design volume using the installed volume dampers. Any equipment that fell outside of this tolerance is noted throughout the report.

Notes:
ORIGINAL DESIGN OF 4,895 CFM WAS ADJUSTED TO 5,250 CFM.
DIFFUSER DESIGNS WERE ADJUSTED TO ACHIEVE NEW TOTAL DESIGN CFM.

DESIGN CFM OBTAINED WHILE UNIT WAS OPERATING AT 60Hz.

DIFFUSERS #3 AND #5 ARE NOT EQUIPTED WITH A DAMPER TO LOWER CFM TO AREA SERVED.

CONTROL ERROR: C1 SHUTDOWN EXCEEDED OP ENV LIMITS. UNIT STILL OPERATING IN COOLING MODE.
