Hi Will

I am traveling, but please accept this as authorization to proceed. I have copied in Brooke she will be able to make the credit card payment

Best regards

Sounds good Chris

Please see attached proposal. What we would do is balance the total supply and outside air to the RTU's. In the kitchen we'd balance to either the design flows at each diffuser or so that the hoods capture. Then in the dining we'd balance for comfort only - i.e., to eliminate drafting, noise, and open any dampers that may be closed. Then we'd also balance the hoods.

What we've done on similar projects is get started around 7am and do work in the store until they open. Then do roof work that doesn't affect Operations after they open. Rinse and repeat day #2. This scope and schedule allows us to keep price down and has worked well on similar projects for Culver's corporate. Also our terms on this project would need to be credit card charged week of the project so could you please fill out the client information link below so we know who to email that link to? Thanks!

Hi Will

Sorry I have been behind on getting the answers. The owners want to balance the whole store. We do not have the plans but it is effectively an XL prototype

Hi Chris
Sounds good thanks for reaching out.
Are we just balancing the new RTU's only or are you wanting a balance on the hoods and exhausts as well?
Do you happen to have any mechanical drawings or RTU submittals?
Thanks,

Subject: Culver's of Green Bay WI - Voyageur test and balance

Hi Will

We replaced the RTUs on the Culver's of Green Bay WI on Voyageur. The ownership is S & L. We are doing new stores for them all over the country. They have over 80 stores at this time. Can you please quote the test and balance to be done in their off hours?
